

Yuheng Wang

Seattle, WA | arrokothwhi@gmail.com | 206-390-3402 | github.com/Arrokothwh

Education

University of Washington, BS in Mathematics, Computer Science Sept 2023 – May 2027

GPA: 3.9/4.0

Coursework: Linear Algebra, Probability, Optimization, Deep Learning, Advanced Machine Learning, NLP

RESEARCH EXPERIENCE

Student Researcher, Ai2, Seattle, WA Apr. 2026 – Present

- Work on video-based vision encoder training infrastructure for multimodal models.

Research Assistant, Raivn Lab, University of Washington, Seattle, WA Sep. 2025 – Present

- Focus on generative modeling, vision understanding, and multimodal learning for visual AI systems.

Research Assistant, Institute of Computing Technology, Chinese Academy of Sciences, Beijing, CHN Jul. 2023 – Sep. 2023

- Focused on expanding the applications of sign language recognition, particularly in augmented reality (AR) and virtual reality (VR) environments.

SELECTED RESEARCH PROJECTS

RefDecoder Sep. 2025 – Mar. 2026

refdecoder.github.io/

Raivn Lab, University of Washington

- Developed a reference-conditioned VAE decoder for image-to-video generation, improving reconstruction and visual fidelity.
- Designed reference-attention modules to inject fine-grained image features throughout video decoding.
- Trained and evaluated the approach across video VAE backbones and large-scale datasets, demonstrating consistent gains over baselines.

Molmo Encoder Apr. 2026 – Present

Ai2

- Developed the video post-training data pipeline for the Molmo vision encoder.
- Built an end-to-end knowledge distillation pipeline and led model training and evaluation.
- Developed a safety filtering pipeline for large-scale video training data.

Virtual VLA Apr. 2026 – Present

Raivn Lab, University of Washington

- Contribute to a cross-embodiment VLA project studying scalable policy learning across diverse virtual robot embodiments.
- Develop large-scale data generation pipelines for cross-embodiment training with aligned visual, language, and action trajectories.
- Contribute to model training and evaluation, studying generalization across diverse embodiments and data scales.

Technologies

Languages: Python, Java, C, JavaScript, TypeScript, MATLAB

Technologies: PyTorch, TensorFlow, Distributed Training, Computer Vision, Generative Models, Transformer Architectures, Data Pipelines
